

New technologies pave the way for future growth

The German software and IT services industries flourish from demand for digitalising business processes throughout a variety of verticals. New industrial use cases which are powered by new technologies help to improve efficiency and thus fuel software industry growth. In addition, major political and societal initiatives such as the energy transition and the electrification of the car fleet call for new solutions, which can cope with the changing requirements on infrastructure and business operations. This will create opportunities for software companies to stand out as true innovators, supporting their clients adapting to a changing environment. With this report we initiate our coverage on one IT services and five software companies.

German software and IT services industries

The largest software / IT services market in Europe is located in Germany, expected to total EUR 64bn in volume in FY2018e. According to the economic development agency of the Federal Republic of Germany, Germany Trade & Invest (GTAI), the German information technology market is driven by a powerful "Mittelstand". Established mid-sized companies are asking for innovative solutions in order to maintain or improve their competitive edge by boosting efficiency. For this reason, prominent technological innovations such as cloud, artificial intelligence, blockchain, the Internet-of-Things, and consequently the growing need for reliable cybersecurity inspire software companies to develop new use cases for their clients. We think that the cloud technology stands out for the IT sector, as it directly affects the way of how software companies operate: many providers are already offering or switching to a Software-as-a-Service (SaaS) model. Nevertheless, the biggest challenge for players in the industry remains the acquisition of talent, which is the key resource in order to safeguard competitiveness.

Software / IT services top pick

Currently, our preferred software company is PSI Software, which irrespective of a relatively small market cap offers a rather diversified customer portfolio. Generally, we find PSI's tilt towards sectors currently undergoing structural changes appealing, as this situation offers business opportunities for the company. The strong demand is currently underpinned by record order intake in FY2018e of ~EUR 215m (book-to-bill FY2018e: 1.1x). We think the good order situation should continue into the first half of FY2019, as signalled by two smaller acquisitions and expansion plans in North America. Since PSI harmonises its IT platform in order to sell more modularised products instead of individual projects, we additionally see the potential for long-term value creation through improved profitability.

*Largest software / IT services market in Europe***The German IT market**

The German information technology (IT) market is expected to reach a market volume of EUR 88.8bn in 2018e, according to the German federal association for information technology, telecommunications and new media (bitkom). Bitkom divides the domestic IT market into software (2018e market volume: EUR 24bn), IT hardware (EUR 24bn), and IT services (EUR 40bn). While the hardware industry is expected to grow only slightly in FY2018e (0.9% yoy), IT services are expected to grow 110bps slower than nominal German GDP growth (2.6% yoy vs 3.7% yoy). The software segment is expected to continue claiming its role as the sector's growth driver with 6.3% yoy expected growth, in line with previous years. In sum, the German IT market is expected to grow at 3.1% yoy in FY2018e.

In a European context, Germany has had the single largest software and IT services market in FY2017, (total volume EUR 62bn) followed by the UK (EUR 59bn) and France (EUR 54bn).

The overarching player in the German IT market is software giant SAP (not rated). In FY2017, SAP's German sales represented c. 15% of the total software market. The almost 50-year old software veteran established strong ties to the German industrial sector and can rely on a strong domestic ecosystem of around 700 partners that sell, implement, extend and run SAP solutions for their clients.

As human resource is the critical input factor to the software / IT services industries, Germany provides an attractive business environment with an educated workforce (80%+ academics or vocational training) and moderate wage costs developments (Q2 2018 +2% yoy labour costs vs EU (28) of +2.6% yoy according to Eurostat). However, although Germany has the largest number of software developers in Europe (837k according to Stack Overflow) the war for talent rages, as talent shortage poses a problem to the whole industry.

Market drivers*Cloud, blockchain, big data, artificial intelligence and the internet of things drive demand*

Generally, the way how business is conducted is set to change fundamentally in many verticals. Players like Nemetschek and RIB Software focus on enhancing the productivity in the construction industry, for example. GFT Technologies provides services to the financial services sector in order to maintain the IT landscape, but also to drive innovation.

"Hot" topics such as artificial intelligence, cloud computing, big data, internet of things, blockchain and as a consequence of the digitalisation of business processes also cybersecurity determine the dynamic growth in the software and IT services market. The appeal of those topics is the possibility that new use cases not only change the business but improve the efficiency in many areas significantly. Furthermore, in some cases, these new technologies are the answer to changed regulation (energy transition, German "Energiewende") or sector disruptions (e-mobility). Since the production process for an electric vehicle differs from that of traditional motor vehicles, software providers such as PSI Software deliver smart production solutions into the industry that undergoes structural change. Software AG targets the dynamic IoT market with annual growth rates in the relevant market in the mid-double digit range. Its industrial clients from the engineering and tooling industry are for example provided with real-time data analytics software that is an important component of predictive maintenance applications. This application lets clients profit from enhanced internal efficiency and reduced costs.

Cloud computing has already penetrated the German industry due to its appeal in terms of cost-effectiveness and flexibility. According to bitkom, two out of three German companies already implemented cloud computing solutions. But, there is still potential, especially for the financial industry, where still a lot of operations are run on mainframes. We regard the shift from mainframe to the cloud as a potential trigger for GFT Technologies.

In our coverage, PSI Software was an early innovator regarding the use of artificial intelligence. With the use of its own algorithm, the company helps its clients to improve manufacturing and warehousing processes, even in complex applications. RIB Software announced an artificial intelligence that is supposed to support project planners, general contractors, and construction companies in the building process. The AI market is still in an early stage. Therefore, AI seems to promise more relevant use cases, as the technology becomes more mature. Another topic, not yet covered in our universe, is the increasing relevance on reliable cybersecurity systems. With increasing digital attacks on infrastructure and internal communication systems, demonstrated by an increasing number of data breaches, cybersecurity is another promising growth driver in the software / IT services industries.

Finally, software companies are currently more and more embracing the shift from a license business to a cloud business to generate more predictable and less volatile income from their clients. In the early stages of this transition, this might hurt the companies' top line, as one-time license revenues are replaced with recurring (but smaller) monthly payments. Thus, it usually takes a certain start-up period to compensate the decline in licenses with a growing share of recurring subscription revenue. In our universe, Intershop is currently in that transition period. After a transition year FY2018e with said decline in license revenue, the company now targets the return to growth in FY2019e. Other players such as RIB Software and Nemetschek chose a rather gradual approach. RIB Software now offers a user-based subscription out of the Microsoft Azure cloud (as does Intershop) next to its established offering. Nemetschek, in contrast to the globally leading Architecture-Engineering-Construction software company Autodesk, which mandatorily switched to SaaS, leaves the choice between license and SaaS to its customers.

Too cheap to ignore

In the last two years, innovative financial IT services company GFT Technologies left its growth path due to significant budget cuts at its major customer Deutsche Bank. In order to decrease dependency, GFT targets new verticals and drives innovation in new technologies such as blockchain, AI, or cloud. The shares suffered disproportionately such that we currently regard them as attractively valued (9x P/E). We rate GFT with a Buy rating and a TP of EUR 13.50.

Investment case

GFT Technologies serves the IT services market, so far primarily in the financial industry. The innovative solutions cover new technologies (e.g. AI, cloud, blockchain), but also “standard” financial IT services such as consulting and development / implementation / maintenance. With digitalisation pressure and the upcoming move to the cloud of banking processes and services, we consider the market growth drivers intact. New growth avenues in other verticals and clients would improve the risk profile, but it requires some balancing between maintaining a healthy business relationship to the recently difficult major client Deutsche Bank and the re-routing of business to other clients.

The high dependency on Deutsche Bank (c. 40% of group revenues) can be a blessing and a curse at the same time. In FY2017 and FY2018 it was more of the latter, but management transparently communicated the issues throughout the year. Therefore, we get the impression that the shares suffered disproportionately in FY2018. Independent from how we look at it, GFT's shares look too cheap to ignore to us. Our DCF yields 81% upside and compared to its historical multiple, GFT trades at a 71% discount. We initiate coverage with a TP of EUR 13.50 and a Buy rating.

IT consulting and services company with banking and insurance focus

Digitalisation in banking and regulatory compliance drive the IT services market in finance / new technologies and verticals shall decrease cluster risk

Sensitivity to IT budget restrictions at core customers

Target price of EUR 13.50

Company profile

GFT Technologies is an IT-consulting and services company. GFT's offering includes consulting on IT strategies, development of innovative IT solutions, implementation of standard software, maintenance and development of banking processes, as well as outsourcing. So far GFT is mainly active in the banking and insurance industries, but management targets other verticals as well (starting with German industrials). GFT employs a near-shoring model, with c. 50% of coding being done in Spain, Brazil, Poland, Mexico, and Costa Rica.

Upcoming triggers and drivers

The key drivers in GFT's market are digitalisation of business processes, implementation of regulatory compliance, as well as outsourcing of IT services. In the short- to mid-term, the probably most significant driver of growth will be the shift to the cloud in the banking industry. Technology-wise, we regard GFT as an early-mover. Exemplary, it has been the first IT services company to cooperate with Google Cloud to identify AI / big data / microservices use cases in the financial sector. Sustainable growth avenues outside GFT's largest customers and in new verticals would improve the risk profile, in our view. On company level, GFT currently obtains 35-40% of its revenues from Deutsche Bank. Therefore, GFT is to a meaningful extent exposed to the well-being of its largest customer. Sudden (and unpredictable) cuts on IT spending would harm GFT's revenue growth and to a lesser extent operating earnings (c. 50 time-and-material contracts). Deutsche Bank typically used this as a measure to save costs towards the year-end, which is why we believe investors remained especially cautious since late H1 2018. The subdued demand for GFT's shares is depicted in the disproportionate decline in the share price since early September (-42%, vs. -17% Euro Stoxx TMI Software & Computer Services). With EUR 400m revenues and EUR 39m EBITDA, the management confirmed its somewhat stretched, but not unrealistic FY2018 targets. Achieving those targets should in our view draw investor attention and help to reverse the share price development.

Next scheduled reporting: Preliminary Q4 results scheduled for February 28 2019.

Risks to the investment case

As indicated in the triggers and drivers section, the greatest single risk to our investment case is project cuts at GFT's top client Deutsche Bank. In the past, Deutsche Bank used this measure to save costs towards year-end. In our eyes, the risks from last minute project cuts towards the year-end are real, but in manageable amounts, as they have been communicated, integrated into the guidance, and should be more than reflected in the share price. Additionally, as for all technology companies, it is crucial for GFT to attract sufficient and educated IT talent. Anecdotal evidence suggests that competition about talent is meanwhile also fought in near- and off-shore locations.

Valuation and recommendation

Based on our DCF analysis, we derive a fair value of EUR 14.30, which is equivalent to 81% upside. Since we do not believe GFT to re-rate that significantly within our 12-month forecast period, we stick to the historical multiple. Based on GFT's historical valuation and its valuation relative to a list of global IT services companies, we derive a fair multiple of 16x NTM EPS. With regard to our NTM EPS estimate of EUR 0.84, we derive a target price of EUR 13.50, which is equivalent to an upside of 71%. The current pricing of the shares reflects a "zero growth scenario", which is by all means too pessimistic, in our view. We rate GFT with a Buy rating.

Significant mid-term potential from cloud transformation

Intershop offers a competitive e-commerce solution that suffered from low visibility in its relevant market in the past. Declines in revenue resulted into non-profitability paired with uninspiring share price development. With the help of software giant Microsoft, Intershop intensifies its efforts to target the thriving B2B segment via a cloud offering. This turnaround scenario with focus on revenue growth is a high risk / high reward case, in our view. We rate Intershop with a Buy rating and a target price of EUR 1.75.

Investment case

By cooperating with Microsoft, Intershop aims at establishing itself in the cloud / subscription market and accessing a broadened customer universe. The sales and technology partnership gives Intershop access to a huge ecosystem and client base and complements Intershop's offering.

With a "cloud first" approach Intershop's sales growth has been negative in FY2018, but group sales are expected to grow at 13% p.a. over the next five years. At the same time, growth will enable operating leverage and should improve EBIT margin by 480bps to 6.0% by 2020. Based on the growth scenario, FCF should follow the positive earnings development.

Additionally, as many of Intershop's former competitors were acquired by multinational software companies, Intershop may also draw attention from potential acquirers, especially in light of the solution's good reputation. A typical premium paid for comparable public companies is at around 50%. Comparing Intershop's fundamentals to comparable companies and transactions multiples, we observe that Intershop's multiples have significant potential to re-rate if the company can deliver on its growth targets.

Independent provider of e-commerce software

Company profile

Intershop is an e-commerce software developer with a competitive solution suited for complex commerce applications. Intershop's solution has been awarded strong ratings by independent software research providers such as Gartner or Forrester. In the most recent Forrester report, Intershop has been declared a leading B2B Commerce Suite provider with the highest rating for the current offering. During the last couple of years, however, the company suffered from low visibility in its relevant market, leading to a sales decline from EUR 53m in 2013 to EUR 34m in 2016.

All eyes on cloud order intake / sales growth

Upcoming triggers and drivers

In the short-term, we expect that the focus will be on how well the initial positive reception of the cloud offering carries further momentum. Therefore, we identify the release of Q4 results in February 2019 to be the next potential trigger besides large deal announcements via ad-hoc releases. Cloud order intake is a particularly important indicator to us on how fast the cloud business has the potential to compensate for declines in license sales.

In addition, as Intershop reaches a critical size, acquisition fantasies may increasingly be played by the market, offering support for the shares.

Next scheduled reporting: Preliminary Q4 results on February 20, 2019.

Despite increased efforts in marketing, Intershop's solution may fail to create sufficient market perception

Risks to the investment case

The major risk we see is that Intershop may not be able to achieve revenue growth and may consequently face difficulties maintaining operating profitability. We therefore consider the stock's profile high risk / high reward. Potential threats for growth arise if Intershop is not able to create the expected brand perception in the market and accordingly does not win as many new customers as required to achieve the company's targets.

As for most software companies, finding appropriate talent is key to remain competitive. If Intershop cannot staff its departments that are central for the future development of the group (e.g. research & development, sales and marketing), the company is at risk to fall behind competition.

Target price of EUR 1.75

Valuation and recommendation

Based on our DCF analysis, we derive a target price of EUR 1.75 and rate Intershop's shares with a Buy rating, due to the significant potential inherent in the turnaround cloud transformation story.

Exhibit 3: DCF analysis

Qualitative growth that has its price

Nemetschek is one of the leading global Architecture-Engineering-Construction (AEC) software suppliers with a comprehensive offering for a variety of customer groups. We regard Nemetschek as a high-quality play due to its intact growth drivers, well-executed strategy, and strong cash flow generation. Despite a sound set of fundamentals and supportive external factors, we see Nemetschek's shares currently fully valued and issue a Hold rating with a TP of EUR 105.

Investment case

While the increasing mandatory adaption of Building Information Modeling (BIM) for public construction tenders drives demand from a regulatory perspective, the underinvested construction vertical additionally has a lot of digitalisation potential in order to overcome structural productivity deficits. Nemetschek is a provider of precisely those solutions that shall help its customers to significantly improve efficiency and eventually profitability.

With at least 1-2 successful acquisitions p.a. over the last five years, M&A activities form an integral part of the company's impressive growth strategy (5yr historical revenue CAGR: 18%; 9M 2018: 18% at cc, 16% organic at cc). The strong cash flow generation further allows Nemetschek to pursue growth opportunities with internal financing. Outside its existing offering, Nemetschek evaluates growth opportunities in adjacent market segments such as new verticals in media / entertainment or the smart building sector.

Despite the solid fundamentals and the recent weakness in the sector, Nemetschek looks more or less fully valued to us at 49x 2019 EPS. We initiate coverage with a Hold rating and a TP of EUR 105.

Developer of application software for the AEC and media / entertainment industry

Mandatory BIM and necessary productivity improvements in the construction industry fuel demand, upside from M&A

High growth expectations reflected in the shares

Target price of EUR 105

Company profile

Nemetschek is a holding company that unites market-leading brands with solutions for the architecture-engineering-construction (AEC, 94% of FY2018e group revenue) and media / entertainment industry. The solutions include 3D-planning tools, project management, efficiency and collaboration and facility management tools. Nemetschek's offering covers the complete life-cycle in construction from virtual planning over time and cost calculation, tendering and contract awarding to the construction process and management of the completed building. The media / entertainment offering encompasses 3D modelling and graphical design software.

Upcoming triggers and drivers

The main growth drivers for Nemetschek are the increasing digitalisation of the AEC industry due to regulatory required BIM application and the need for productivity increases at construction companies. As an example, Nemetschek demonstrated at its first CMD in mid-November how one of the leading general contractors was able to realise efficiency gains in its operations in a way that operating earnings multiplied over just three years by the factor 5x.

Besides organic growth drivers, Nemetschek has an impressive M&A track record, with at least 1-2 successful acquisitions p.a. since 2013. Since we did not include potential M&A in our model, further upside may arise from deal announcements (8-10 targets in the pipeline, c. EUR 250m dry powder for acquisitions).

Disappointments in expected growth that is reflected in the share price can be a negative trigger, in our view.

Next scheduled reporting: preliminary Q4 results expected in February, annual report expected in March 2019.

Risks to the investment case

After extraordinary multiple expansion over FY2017 and most of FY2018, Nemetschek lost c. 33% of market capitalisation since peak-levels in mid-September. At still rich valuation levels, Nemetschek might suffer further from negative sector sentiment, although the fundamentals continue to seem in place to us. Moreover, with already 50% recurring revenues, we would expect a certain downturn resilience of the business.

More generally, we observe that despite the recent sell-off there is still a lot of growth priced in. Over our 5yr detail planning period, we forecast 14% organic growth, in line with mid-point guidance of 13%-15%. As FY2019/FY2020 consensus growth estimates are slightly above our estimates, a slowdown of expected growth rates would put currently elevated multiples at risk and significant multiple compression could be the consequence.

As an internationally active company, Nemetschek is exposed to currency fluctuations, particularly the USD, JPY, CHF, GBP, HUF, NOK, and SEK, which can impact on the group's results.

Valuation and recommendation

We derive a target price of EUR 105 based on our DCF analysis. This is equivalent to 49x 2019 EPS. Although the valuation looks rich, we give credit to a high quality business that showed extraordinary growth over the last five years. With intact growth drivers we do not expect Nemetschek to leave the growth path in the near- and mid-term. The 3yr historical price-earnings multiple of 43x results from steady multiple expansion until H1 2018. With an upside of 2% we rate Nemetschek with a Hold rating.

Preparing the industrial future

PSI Software AG sells management and control software for the utilities, manufacturing, raw material, logistics and public transport industries. Having presented record order intake figures throughout FY2018, we think that the growth story is not yet over. With intact market growth drivers and upside from margin improvements from the shift from a project to a product company, we rate PSI with a Buy rating and a TP of EUR 20.70.

Investment case

In the long term PSI will benefit from regulatory changes in Germany (energy transition, Diesel-bans in the cities) as well as from the disruption taking place in the Automotive sector due to the fight for market share in the electric vehicles segment. The transition to green energy calls for intelligent grid management systems that are able to match energy supply and demand, while at the same time guaranteeing the supply reliability even during peak times. Furthermore, the transition to an electrified car fleet demands rethinking of how cars are manufactured. The traditional assembly-line is likely to be replaced in favour of a smart "swarm production". For either of the problems mentioned above PSI delivers an intelligent solution.

PSI is currently transitioning from a rather project-driven company towards a product company that sells more modularised software than it has in the past. This offers significant margin upside once the harmonisation of the IT-platform is completed.

For its still relatively small size, PSI bears limited cluster risk in its customer portfolio (largest single customer over the last years typically <5%). Additionally, the customer exposure is spread over several industries, which mitigates exposure to cyclical downturns in certain customer industries to some extent.

In sum, we appreciate the combination of long-term prospects and margin upside from harmonising the IT platform and initiate coverage with a Buy rating and a target price of EUR 20.70.

Software developer of controlling and management applications for complex optimisation problems

Energy transition, electrification of the car fleet, and smart production main growth drivers

Industry-wide investment backlogs / regulatory risk

Target price of EUR 20.70

Company profile

PSI Software AG develops and integrates process control and optimisation application software mainly for utilities, manufacturers, metal producers, logistics and public transport companies. The software is designed to control and manage flows (e.g. of energy, materials, vehicles) and with the help of PSI's proprietary algorithm the solution solves complex optimisation problems for the most efficient (probabilistic) "solution".

Upcoming triggers and drivers

One of PSI's main market growth drivers is the ongoing electrification of the car fleet that will lead to increased energy consumption from private and public households in order to charge their cars. Furthermore, with Diesel bans coming into effect in some major cities in Germany, the public transport providers that also operate Diesel buses need to comply by offering more emission-friendly services. Finally, the energy transition initiated by the German coalition in 2010 that aims at reducing greenhouse emissions by 80-95% by 2050, while at the same time consuming 60% final energy from green renewable sources, serves as a major growth driver that not only requires investments into infrastructure, but also into grid management solutions that ensure the operation of a stable network.

Since PSI regularly reports closed deals, we expect steady deal flow to continue into H1 2019, underlining the current strong demand for the company's solutions.

Next scheduled reporting: Q4 results expected in March 2019.

Key risks

In the past, PSI was concerned, when certain industries / regions cut their IT / Software spending. For example, PSI lost accumulated EUR 20m revenues in the South East Asian division over the last five years as a consequence of curbed investments following declining raw material prices. Similarly, the uncertainty in the European metals market (US tariffs), may be an obstacle to growth, if customers postpone software investments.

As PSI is engaged in critical infrastructure projects and to some extent in regions with exposure to international political risk (Russia, Middle East), we also see risks that come from changes in regulation or politically motivated barriers to trade that might lead to project delays / cancellations.

Valuation and recommendation

We value PSI Software AG based on our DCF analysis. Our target price of EUR 20.70 implies a target NTM P/E of 24x. With an upside of 25%, we rate PSI Software AG with a Buy recommendation.

Reinventing the construction sector

RIB Software is an application software company with customers in the construction industry. The company not only markets its established iTWO 4.0 solution, but also engages as an incubator for innovative solutions that aim at digitalising the construction industry. Based on our SOTP valuation, we derive a target price of EUR 20.40 and issue a Buy recommendation.

Investment case

RIB Software offers planning and control software solutions for the construction industry that are suitable for Building Information Modeling (BIM) applications. Since BIM becomes increasingly mandatory in public tenders and the construction industry still has a lot of catch-up potential in order to overcome its productivity deficit, we regard the market's growth drivers as attractive.

On company-level, RIB can be considered an established player in the market with >1,000 key account customers. Besides, RIB is breaking new ground with innovative solutions that have huge growth opportunities. YTwo (integrated supply chain solution) and MTWO (vertical cloud for the construction industry) are both based on RIB's iTWO 4.0 software and shall help to achieve the next milestones in terms of revenue / market cap.

This year, the company collected EUR 130m in a capital increase in order to invest into Managed Service Providers (MSPs) to increase the speed of the international MTWO roll-out. By 2020 the company targets 100,000 MTWO users, which is a massive growth avenue for the company. Incorporating the potential from the start-up businesses, we value RIB with a TP of EUR 20.40, based on our SOTP valuation. We initiate coverage with a Buy recommendation

Established software developer and innovator for the construction industry

Growth drivers: regulatory compliance and pressure to improve productivity in the construction industry

Triggers ahead: first meaningful revenues via MTWO & Y TWO in FY2019e

Unsuccessful roll-out of MTWO / competition from major players

Target price of EUR 20.40

Company profile

RIB Software SE is an application software company that develops and markets modular and end-to-end planning and control software solutions to the building and construction industry. The software is used for the design, construction and maintenance of buildings and plants. RIB also provides consulting and training for implementation projects as well as an e-commerce platform. The company can be separated into an established software developer on the one side and into an incubator for innovative solutions that drive digitalisation in the construction industry on the other side.

Upcoming triggers and drivers

RIB Software operates in a market with huge growth potential in the years to come. First, more and more countries adopt binding Building Information Modeling (BIM) standards in public tenders in order to avoid cost and time overruns (Scandinavia since 2010, UK since 2016, Germany follows in 2020). Second, the decline in real productivity in the construction industry demands for solutions that help overcome excessive waste and inefficiencies at construction companies. Therefore, we see two major growth drivers that help growing the BIM market for construction-related software by 15-20% p.a. until 2022, according to Marketsandmarkets and Zion Research.

In 2016, RIB Software founded Y TWO, a JV with FLEX, which aims at revolutionising the supply chain in construction. In short, construction companies will be able to order their necessary supplies for the construction site directly via RIB's software, thus saving costs by eliminating intermediaries. This project has a huge potential to re-route the flow of construction material through RIB's platform. So far, no meaningful revenues have been generated, but the company recently announced that first orders haven been processed by now. Additionally, in cooperation with Microsoft, RIB kicked-off MTWO earlier this year. The world's first vertical cloud is targeted at all participants in the construction process and available as a subscription service. The company targets 100,000 paying users by the end of 2020. We expect first meaningful revenues in FY2019e, as the first customers are currently on-boarding.

Risks to the investment case

RIB's management raises high expectations regarding their new businesses. If project delays or insufficient market acceptance of the new product cannot fulfil these expectations, this might lead to disappointments and negative earnings revisions.

So far, RIB has a focused product portfolio that is built around iTWO. As BIM will evolve further, there may be the risk that an industry "standard" for BIM technology emerges, which could work in favour or against RIB Software. Furthermore, the building process is intellectual property to construction companies, which is why constructors / home developers may be reluctant to move their knowledge into the cloud.

Next scheduled reporting: preliminary Q4 results on February 22, 2019.

Valuation and recommendation

We value RIB Software based on our SOTP analysis. The valuations for the business segments iTWO, Y TWO and MTWO are calculated individually based on separate DCF analyses. The start-ups Y TWO and MTWO enter our SOTP valuation with only 10% of the total DCF value (90% start-up discount) due to the early stage of the business. Since our target price of EUR 20.40 is equivalent to an upside of 54%, we rate RIB Software with a Buy recommendation.

Fresh DNA for a software veteran

Software AG is a developer of database and middleware software that facilitates the digital transformation of their clients. While the mature mainframe software business is appreciated for its low operating costs and steady earnings contributions, the Digital Business Platform is supposed to be the future growth driver of the group. The company's new CEO Sanjay Brahmawar will reveal Software's strategy update "Helix" at the company's CMD in February 2019.

Investment case

We regard Software's product businesses as strategic complements. The database management software cash cow (Adabas & Natural) generates high operating margins (~70%), while the Digital Business Platform (DBP) is the growth driver of the business with focus on driving the digitalisation processes in an enterprise context and targeting the megatrend IoT. Since the IoT business is only in an early stage, it is still a relatively insignificant division (FY2018e: c. 3-4% of group revenues). But, we observe rapid growth (>100% at cc by 9M 2018) and Software targets high double-digit growth rates in order to accumulate market share in the relevant IoT market over the next two years. Once the IoT business is really lifting off, Software should benefit from a usage-based revenue model (based on the number of connected devices, API calls and data volume), which should scale with the number of IoT use cases and applications. Therefore, the company targets a highly relevant and promising (but also competitive) market. As exponential growth in the division is not yet in our sight, we think it is too early to project overly aggressive IoT growth scenarios. Since our view approximately aligns with market expectations, we issue a hold rating, based on our DCF-derived 12-month target price of EUR 40.

Developer of middleware and database software

Company profile

Software AG develops and sells database and middleware software. The historical origins of the company are database software applications for mainframes (Adabas & Natural segment), which generates very high operating margins of around 70%.

The Digital Business Platform (DBP) provides middleware solutions that complement existing IT landscapes in order to facilitate digital business transformation of Software's clients. The company also entered the IoT market. One avenue to set foot into the high growth market is for example the establishment of a strategic JV ADAMOS with mechanical engineers DMG Mori, Dürr, Carl Zeiss, ASM PT, and Engel Austria. Software provides the software platform that lays the foundation for engineering applications in an Industrial IoT context.

In the Consulting segment, Software AG supports the digitalisation process of their customers with custom consulting services.

Upcoming triggers and drivers

Since the market for traditional database software mainframe is mature, Software AG anticipates declining business in the A&N segment for a while now. On the other hand, strong growth targeted via IoT applications (estimated relevant market size: c. 90bn-100bn by FYE 2018; EUR 170bn-190bn by FYE 2020 according to Boston Consulting Group). Software aims at participating from the trend and gaining market share over the next two years (FY 2018 Cloud & IoT revenue: c. EUR 32m; ~ EUR 100m by FYE 2020).

On February 05, 2019 Software AG will host its annual Capital Markets Day in London, where the new CEO Sanjay Brahmawar (in office since August 01, 2018) will present an updated corporate strategy.

Disappointments in the segment of the yet-to-be-distributed IoT cake might be a negative trigger, if Software does not meet growth targets.

Next scheduled reporting: FY 2018 results on January 31, 2019.

Risks to the investment case

As for most Software / IT services companies, Software depends on the availability of appropriate talent. Especially, the mature mainframe database software segment might face challenges recruiting new personnel since students likely prefer to specialise in areas with more promising career prospects.

As a globally active company, Software AG is further exposed to currency fluctuations, most notably the USD (9M 2018: c. 30% of group revenue in USD).

Valuation and recommendation

We value Software AG based on our DCF analysis and arrive at a target price of EUR 40. We initiate coverage of Software AG with a Hold recommendation.

Strategic refresh of new CEO Sanjay Brahmawar at CMD on February 05, 2019

Fight for talent, especially in a mature software segment

Target price of EUR 40

Origin of the publication or report

This publication or report originates from Pareto Securities AS ("Pareto Securities"), reg. no. 956 632 374 (Norway), Pareto Securities AB, reg. no. 556206-8956 (Sweden) or Pareto Securities Limited, reg. no. 3994976, (United Kingdom) (together the Group Companies or the "Pareto Securities Group") acting through their common unit Pareto Securities Research. The Group Companies are supervised by the Financial Supervisory Authority of their respective home countries.

Content of the publication or report

This publication or report has been prepared solely by Pareto Securities Research.

Opinions or suggestions from Pareto Securities Research may deviate from recommendations or opinions presented by other departments or companies in the Pareto Securities Group. The reason may typically be the result of differing time horizons, methodologies, contexts or other factors.

Sponsored research

Please note that if this report is labelled as "sponsored research" on the front page, Pareto Securities has entered into an agreement with the company about the preparation of research reports and receives compensation from the company for this service. Sponsored research is prepared by the Research Department of Pareto Securities without any instruction rights by the company. Sponsored research is however commissioned for and paid by the company and such material is considered by Pareto Securities to qualify as an acceptable minor non-monetary benefit according to the EU MiFID II Directive.

Basis and methods for assessment

Opinions and price targets are based on one or more methods of valuation, for instance cash flow analysis, use of multiples, behavioral technical analyses of underlying market movements in combination with considerations of the market situation and the time horizon. Key assumptions of forecasts, price targets and projections in research cited or reproduced appear in the research material from the named sources. The date of publication appears from the research material cited or reproduced. Opinions and estimates may be updated in subsequent versions of the publication or report, provided that the relevant company/issuer is treated anew in such later versions of the publication or report.

Pareto Securities Research may provide credit research with more specific price targets based on different valuation methods, including the analysis of key credit ratios and other factors describing the securities creditworthiness, peer group analysis of securities with similar creditworthiness and different DCF-valuations. All descriptions of loan agreement structures and loan agreement features are obtained from sources which Pareto Securities Research believes to be reliable, but Pareto Securities Research does not represent or warrant their accuracy. Be aware that investors should go through the specific complete loan agreement before investing in any bonds and not base an investment decision based solely on information contained in this publication or report.

Pareto Securities Research has no fixed schedule for updating publications or reports.

Unless otherwise stated on the first page, the publication or report has not been reviewed by the issuer before dissemination. In instances where all or part of a report is presented to the issuer prior to publication, the purpose is to ensure that facts are correct.

Validity of the publication or report

All opinions and estimates in this publication or report are, regardless of source, given in good faith and may only be valid as of the stated date of this publication or report and are subject to change without notice.

No individual investment or tax advice

The publication or report is intended only to provide general and preliminary information to investors and shall not be construed as the basis for any investment decision. This publication or report has been prepared by Pareto Securities Research as general information for private use of investors to whom the publication or report has been distributed, but it is not intended as a personal recommendation of particular financial instruments or strategies and thus it does not provide individually tailored investment advice, and does not take into account the individual investor's particular financial situation, existing holdings or liabilities, investment knowledge and experience, investment objective and horizon or risk profile and preferences. The investor must particularly ensure the suitability of an investment as regards his/her financial and fiscal situation and investment objectives. The investor bears the risk of losses in connection with an investment.

Before acting on any information in this publication or report, we recommend consulting your financial advisor.

The information contained in this publication or report does not constitute advice on the tax consequences of making any particular investment decision. Each investor shall make his/her own appraisal of the tax and other financial merits of his/her investment.

Sources

This publication or report may be based on or contain information, such as opinions, recommendations, estimates, price targets and valuations which emanate from Pareto Securities Research' analysts or representatives, publicly available information, information from other units or companies in the Group Companies, or other named sources.

To the extent this publication or report is based on or contains information emanating from other sources ("Other Sources") than Pareto Securities Research ("External Information"), Pareto Securities Research has deemed the Other Sources to be reliable but neither the companies in the Pareto Securities Group, others associated or affiliated with said companies nor any other person, guarantee the accuracy, adequacy or completeness of the External Information.

Equity ratings:	"Buy"	Pareto Securities Research expects this financial instrument's total return to exceed 10% over the next 12 months
	"Hold"	Pareto Securities Research expects this financial instrument's total return to be between -10% and 10% over the next 12 months
	"Sell"	Pareto Securities Research expects this financial instrument's total return to be negative by more than 10% over the next 12 months

Analysts Certification

The research analyst(s) whose name(s) appear on research reports prepared by Pareto Securities Research certify that: (i) all of the views expressed in the research report accurately reflect their personal views about the subject security or issuer, and (ii) no part of the research analysts' compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analysts in research reports that are prepared by Pareto Securities Research.

The research analysts whose names appear on research reports prepared by Pareto Securities Research received compensation that is based upon various factors including Pareto Securities' total revenues, a portion of which are generated by Pareto Securities' investment banking activities.

Limitation of liability

Pareto Securities Group or other associated and affiliated companies assume no liability as regards to any investment, divestment or retention decision taken by the investor on the basis of this publication or report. In no event will entities of the Pareto Securities Group or other associated and affiliated companies be liable for direct, indirect or incidental, special or consequential damages resulting from the

Risk information

The risk of investing in certain financial instruments, including those mentioned in this document, is generally high, as their market value is exposed to a lot of different factors such as the operational and financial conditions of the relevant company, growth prospects, change in interest rates, the economic and political environment, foreign exchange rates, shifts in market sentiments etc. Where an investment or security is denominated in a different currency to the investor's currency of reference, changes in rates of exchange may have an adverse effect on the value, price or income of or from that investment to the investor. Past performance is not a guide to future performance. Estimates of future performance are based on assumptions that may not be realized. When investing in individual shares, the investor may lose all or part of the investments.

Conflicts of interest

Companies in the Pareto Securities Group, affiliates or staff of companies in the Pareto Securities Group, may perform services for, solidify business from, make a market in, hold long or short positions in, or otherwise be interested in the investments (including derivatives) of any company mentioned in the publication or report. In addition Pareto Securities Group, or affiliates, may from time to time have a broking, advisory or other relationship with a company which is the subject of or referred to in the relevant Research, including acting as that company's official or sponsoring broker and providing investment banking or other financial services. It is the policy of Pareto to seek to act as corporate adviser or broker to some of the companies which are covered by Pareto Securities Research. Accordingly companies covered in any Research may be the subject of marketing initiatives by the Investment Banking Department.

To limit possible conflicts of interest and counter the abuse of inside knowledge, the analysts of Pareto Securities Research are subject to internal rules on sound ethical conduct, the management of inside information, handling of unpublished research material, contact with other units of the Group Companies and personal account dealing. The internal rules have been prepared in accordance with applicable legislation and relevant industry standards. The object of the internal rules is for example to ensure that no analyst will abuse or cause others to abuse confidential information. It is the policy of Pareto Securities Research that no link exists between revenues from capital markets activities and individual analyst remuneration. The Group Companies are members of national stockbrokers' associations in each of the countries in which the Group Companies have their head offices. Internal rules have been developed in accordance with recommendations issued by the stockbrokers associations. This material has been prepared following the Pareto Securities Conflict of Interest Policy.

The guidelines in the policy include rules and measures aimed at achieving a sufficient degree of independence between various departments, business areas and sub-business areas within the Pareto Securities Group in order to, as far as possible, avoid conflicts of interest from arising between such departments, business areas and sub-business areas as well as their customers. One purpose of such measures is to restrict the flow of information between certain business areas and sub-business areas within the Pareto Securities Group, where conflicts of interest may arise and to safeguard the impartialness of the employees. For example, the Investment Banking departments and certain other departments included in the Pareto Securities Group are surrounded by arrangements, so-called Chinese Walls, to restrict the flows of sensitive information from such departments. The internal guidelines also include, without limitation, rules aimed at securing the impartialness of, e.g., analysts working in the Pareto Securities Research departments, restrictions with regard to the remuneration paid to such analysts, requirements with respect to the independence of analysts from other departments within the Pareto Securities Group rules concerning contacts with covered companies and rules concerning personal account trading carried out by analysts.

Distribution restriction

The securities referred to in this publication or report may not be eligible for sale in some jurisdictions and persons into whose possession this document comes should inform themselves about and observe any such restrictions. This publication or report is not intended for and must not be distributed to private customers in the US, or retail clients in the United Kingdom, as defined by the Financial Conduct Authority (FCA).

This research is only intended for and may only be distributed to institutional investors in the United States and U.S. entities seeking more information about any of the issuers or securities discussed in this report should contact Pareto Securities Inc. at 150 East 52nd Street, New York, NY 10022, Tel. 212 829 4200.

Pareto Securities Inc. is a broker-dealer registered with the U.S. Securities and Exchange Commission and is a member of FINRA & SIPC. U.S. To the extent required by applicable U.S. laws and regulations, Pareto Securities Inc. accepts responsibility for the contents of this publication. Investment products provided by or through Pareto Securities Inc. or Pareto Securities Research are not FDIC insured, may lose value and are not guaranteed by Pareto Securities Inc. or Pareto Securities Research. Investing in non-U.S. securities may entail certain risks. This document does not constitute or form part of any offer for sale or subscription, nor shall it or any part of it form the basis of or be relied on in connection with any contract or commitment whatsoever. The securities of non-U.S. issuers may not be registered with or subject to SEC reporting and other requirements. The information available about non-U.S. companies may be limited, and non-U.S. companies are generally not subject to the same uniform auditing and reporting standards as U.S. companies. Market rules, conventions and practices may differ from U.S. markets, adding to transaction costs or causing delays in the purchase or sale of securities. Securities of some non-U.S. companies may not be as liquid as securities of comparable U.S. companies. Fluctuations in the values of national currencies, as well as the potential for governmental restrictions on currency movements, can significantly erode principal and investment returns.

Pareto Securities Research may have material conflicts of interest related to the production or distribution of this research report which, with regard to Pareto Securities Research, are disclosed herein.

Distribution in Singapore

Pareto Securities Pte Ltd holds a Capital Markets Services License is an exempt financial adviser under Financial Advisers Act, Chapter 110 ("FAA") of Singapore and a subsidiary of Pareto Securities AS.

This report is directed solely to persons who qualify as "accredited investors", "expert investors" and "institutional investors" as defined in section 4A(1) Securities and Futures Act, Chapter 289 ("SFA") of Singapore. This report is intended for general circulation amongst such investors and does not take into account the specific investment objectives, financial situation or particular needs of any particular person. You should seek advice from a financial adviser regarding the suitability of any product referred to in this report, taking into account your specific financial objectives, financial situation or particular needs before making a commitment to purchase any such product. Please contact Pareto Securities Pte Ltd, 16 Collyer Quay, # 27-02 Income at Raffles, Singapore 049318, at +65 6408 9800 in matters arising from, or in connection with this report.

Additional provisions on Recommendations distributed in the Canada

Canadian recipients of this research report are advised that this research report is not, and under no circumstances is it to be construed as an offer to sell or a solicitation of or an offer to buy any securities that may be described herein. This research report is not, and under no circumstances is it to be construed as, a prospectus, offering memorandum, advertisement or a public offering in Canada of such securities. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon this research report or the merits of any securities described or discussed herein and any representation to the contrary is an offence. Any securities described or discussed within this research report may only be distributed in Canada in accordance with applicable provincial and territorial securities laws. Any offer or sale in Canada of the securities described or discussed herein will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada nor should it be construed as being tailored to the needs of the recipient. Canadian recipients are advised that Pareto Securities AS, its affiliates and its authorized agents are not responsible for, nor do they accept, any liability whatsoever for any direct or consequential loss arising from any use of this research report or the information contained herein.

Distribution in United Kingdom

This publication is produced in accordance with COBS 12.3 as Non-Independent Research and approved under part IV article 19 of The Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the "FPO") by Pareto Securities Limited for communication in the United Kingdom only to investment professionals as that term is defined in article 19(5) of the FPO. This publication is issued for the benefit of persons who qualify as eligible counterparties or professional clients and should be made available only to such persons and is exempt from the restriction on financial promotion in s21 of the Financial Services and Markets Act 2000 in reliance on provision in the FPO.

Copyright

This publication or report may not be mechanically duplicated, photocopied or otherwise reproduced, in full or in part, under applicable copyright laws. Any infringement of Pareto Securities Research's copyright can be pursued legally whereby the infringer will be held liable for any and all losses and expenses incurred by the infringement.
